

New Proof of Developer Analysis Program

Currently I have done over 90 Proof of Developer Analyses for various coins. This takes a good bit of time to complete as questions are sent to the developer, replies to the analyses are made, and information is compiled to post the information submitted. Since the time of inception the coins created by anonymous developers has decreased exponentially. Before the Proof of Developer program started there were what seemed like a new coin created everyday, built with false promises, copied code with a low number of comments, and some that had hidden pre-mines and code that would generate more coins than was stated.

There are coins that have been analyzed that have reached their lifecycle and have either a non-existent market or are no longer under development by the starting developer. Others continue to develop and push forward in the ever-changing Crypto economy with new developments and future promises for forward innovation. One of the goals for the Proof of Developer program was to always keep it free for those that wanted it. Another goal and pledge was to keep all information confidential and to not release any personal information. Those goals have been accomplished and that information will continue to be confidential.

Taking everything into consideration, as well as what others would like to see from the program, and various aspects I would like to add, there will be some changes starting immediately to the Proof of Developer program. Below are the detailed requirements for gaining a Proof of Developer Analysis for a coin developer broken down into two categories. One category is coins that are less than thirty days from their genesis block, and the second category is coins that are more than thirty days from their genesis block.

Developers with New Coin less than 30 days from genesis block

- Cost - 0.1 BTC
- Information public
 - First & Last Name
 - Country of Origin
 - Personal Email Address
 - Personal Social Media

Developers with Coin more than 30 days from genesis block

- Cost – Free
- Information public
 - First & Last Name
 - Country of Origin
 - Personal Email Address
 - Personal Social Media

Below you will find information regarding developers that decide to remain anonymous. Because there is a higher risk involved with verifying developers that would like to remain anonymous it comes with an extra charge. These charges are broken down into two categories.

Partial Anonymity (For either category of coins)

- Cost - 0.1 BTC
- Information public
 - First Name
 - Country of Origin

Complete Anonymity (For either category of coins)

- Cost – 0.2 BTC
 - Only Information public that is permitted by developer.

Publishing

Proof of Developer Analysis will not be published until the coin is launched.*

** Coin developers wishing for an Analysis to be done before a coin is launched will be subject to meet the highest standard of analyzation (5/5 Plus+ rating).*

3-Step Process

Step 1: Submit an inquiry for a Proof of Developer Analysis to proofofdev.com/contact

Step 2: After receiving a reply, instructions will be given to send half payment as well as the information that will be needed for the analyzation.

Step 3: Once the analyzation is done of the coin developer a request will be sent for final payment. When final payment is made the POD will be posted to proofofdev.com.

Rating Breakdown

The rating scales range from 3 to 5. 3 Being the lowest possible score, and 5 being the highest possible score. There is also a Plus+ rating that is specified below.

3/5 Rating Requirements

- Submitted First & Last Name
- City, State (Province), Country of Origin
- Face Verified by Social Media
- Phone Number for Text/Call Verification
- Personal Email Address
- Educational & GitHub Information

4/5 Rating Requirements

- All previous 3/5 information
- One form of government identification with picture
- Photo submission holding government identification
- Full Home Mailing Address
- Photo submission holding mail with address for verification

5/5 Rating Requirements

- All previous 3/5 & 4/5 information
- Meeting in Person or Third-Party Notarized Verification of Identity

(Plus+) rating can be added to any POD rating via a 3-5 minute video submission.

Proof of Development Program

All developers of coins can participate in the Proof of Development program if they have participated in the Proof of Developer program. Developers will need to submit a list of developments with date of accomplishment to be compiled into a timeline and posted to their Proof of Developer page. Only coins that have been in development from their genesis block for 60 days or more can participate in this service. This is a free service that comes along with the Proof of Developer Analysis.

Proof of Developer VideoCast

All developers of coins can participate in the Proof of Development program if they have participated in the Proof of Developer program. This is a public video cast with Chris Taylor and the developer talking about the coin and discussion community questions about the developer and coin. This is a free service that comes along with the Proof of Developer Analysis. This must be scheduled a week in advance for promotion and scheduling preparation.

Current POD Coins

All current developers of coins that have been analyzed will be able to upgrade to the new POD when submitting the required information. Their current PODs are still supported on the website, but they are verified under the old rating system. Cost for the upgrade is half price for those already analyzed.

Chris Taylor (Crypto Asian) Pledge: All other information submitted will be confidential and will stay confidential.
